

ELIT PT-58-50/300

Pigtail for 5/8" earth rods

Technical description

The conical pigtail is designed to ensure a stable and lasting connection between the ground rod and the copper wire. An excellent alternative to the conventional earthing clamp that does not guarantee a lasting connection. The pigtail is made of "BZT copper". It is designed as a "half joint sleeve" for attachment to the ground rod and with a top for the copper wire which is molded to the sleeve under 20 tons of pressure.

The pigtail is mounted on the ground rod using a hammer (five light blows require at least 1.5 tons of traction to get it off). The ELIT PT-58-50 / 300 model has 50mm² copper wire with 300mm length mounted and the sleeve is made for conical connection to 5/8 "unthreaded ground spikes.

Advantages:

Provides easy connection of earth conductor to earth rods
Mounted a 30cm PN ready for use
Provides a durable and good connection that can be buried
